

CORE ANGULAR FUNDAMENTALS:

1. What is Angular and how is it different from AngularJS?
2. What are the key features of Angular?
3. What is the component-based architecture in Angular?
4. How does Angular's change detection work?
5. What are modules in Angular?
6. What is a standalone component? Why is it useful?
7. How does Angular handle routing?
8. What is lazy loading in Angular?
9. What is the difference between template-driven and reactive forms?
10. What is two-way data binding? How is it implemented?

ADVANCED ANGULAR CONCEPTS:

1. What are Angular Signals? How do they work?
2. What is the role of NgModules in Angular 15+?
3. How does Angular's dependency injection system work?
4. What is an observable? How is it used in Angular?
5. Explain the difference between Subject and BehaviorSubject.
6. What are some common RxJS operators used in Angular?
7. What is the purpose of the async pipe?
8. What is view encapsulation?
9. How does Angular handle dynamic components?
10. How do you use Angular lifecycle hooks?

PERFORMANCE OPTIMIZATION:

1. How do you optimize an Angular app?
2. What is OnPush change detection strategy?
3. How do you handle large lists or virtual scrolling in Angular?
4. What are common performance anti-patterns in Angular?
5. How do you analyze bundle size in Angular?
6. How do you implement code splitting?
7. How do you optimize API calls in Angular?

STATE MANAGEMENT:

1. What is NgRx? Why and when would you use it?
2. What is Akita? How does it compare to NgRx?
3. What are lightweight alternatives to NgRx?
4. How do Signals change the state management landscape in Angular?
5. How do you handle server state vs client state?

TESTING:

1. How do you test Angular components?
2. What is the difference between unit testing and integration testing in Angular?
3. How do you use Jasmine and Karma in Angular?
4. What is Cypress and why is it gaining popularity in Angular testing?
5. How do you test services in Angular?
6. How do you mock HTTP requests in tests?

ARCHITECTURE & PATTERNS:

1. How would you structure a large Angular app?
2. What are best practices for component reusability?
3. How do you implement feature modules?
4. What is a monorepo and how is Nx used in Angular?
5. What is micro-frontend architecture?

SECURITY:

1. What are common security risks in Angular apps?
2. How does Angular help prevent XSS attacks?

3. How would you handle authentication and authorization in Angular?

MISCELLANEOUS / EMERGING TOPICS:

1. What's new in Angular 17 / 18 / upcoming 19?
2. What's the future of Signals in Angular?
3. How would you migrate a legacy AngularJS app?
4. What is your experience with accessibility (a11y) in Angular?
